energy supply to  
transition and fresh  
calved cows

# glycerene<sup>ufac</sup>

## The proven way to boost energy supply to transition and fresh calved cows.

Glycerene is designed to get cows settled into lactation, achieving high dry matter intakes and minimising body condition loss is a major challenge for dairy farmers. Achieve this and profitable lactations can result.

### Key Features:

- ✔ Provides high level of rumen inert Glycerene
- ✔ Enhances total fat utilisation
- ✔ Highly palatable
- ✔ Provides glucogenic energy with-out creating heat in the rumen
- ✔ Improves Nitrogen utilisation

### Key Benefits:

- ✔ glycerene is an efficient precursor of glucose, the body's primary energy source which is used directly by the liver
- ✔ Reduced amount of body fat that needs to be mobilised
- ✔ Passes through the rumen so more glycerol is available to the cow than from unprotected liquid glycerol supplements
- ✔ Improves total dry matter intakes, reducing condition loss and supporting higher milk yields
- ✔ glycerene acts as a preservative and helps maintain ration quality

### Typical daily feed rates

Dairy Cows	300-750grams/head/day
Sheep and Goats	30-75grams/head/day
