monomega^{ufac}

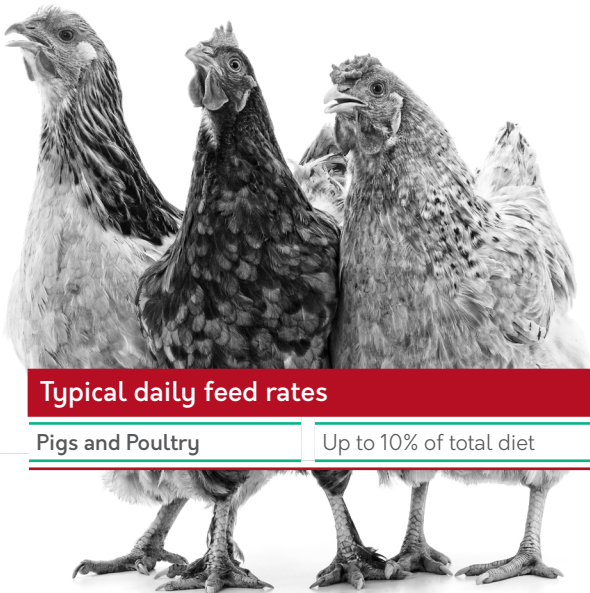

An amino acid and Omega-3 supplement for pigs and poultry.

monomega is a free-flowing dust-free meal made up of specific fatty acids blended with a vegetable protein meal, synthetic amino acids and glucose syrup. Designed to enhance monogastric diets to enhance reproductive activity, piglet and chick survival, growth rates, egg laying, hatchability and milk production in sows. Monomega can replace fishmeal on a 1:1 basis.

Key Benefits:

- ✔ A fish meal replacer with the benefits of Omega 3 fatty acids
- ✔ Can used by mixed species, mills and farms
- ✔ Increase growth rates
- ✔ Lower mortality rates
- ✔ Improved conception rates
- ✔ Improved milk yield and quality in sows
- ✔ Increase in egg size and numbers
- ✔ Improved hatchability
- ✔ Boosting immune system
- ✔ More cost-effective than fishmeal
